Fossilized Sand Dollars,

Madagascar

Sand dollar fossils are fossilized echinoids, small spiny sea creatures found in oceans all over the world. The class Echinoidea includes sea urchins and sand dollars. These fossilized sand dollars date from the Jurassic period (160 million years ago), and are found and polished in Madagascar. Sand dollar fossils are unusual in that their structure has not changed for millions of years, and the fossils are very similar in structure to their modern, non-fossilized counterparts.
