SMOKY QUARTZ

SMOKY QUARTZ is a variety of QUARTZ. The brown, black or smoky gray color is due to exposure to radiation - either natural or artificial. Smoky quartz is used as an inexpensive gemstone, and is a popular material for carved objects such as spheres, figurines, pyramids, etc. Chemically, smoky quartz is silicon dioxide. It has a hardness of 7 on the Moh's Hardness Scale. The crystal system is trigoal. Smoky quartz is found in the USA, Brazil, Madagascar, Russia, Scotland, and Switzerland.
